

The next generation of geysers are here. The Dewhot EcoDew 5lt LP

Two years in the making, the Dewhot 5lt LP gas geyser can be simply summed up as innovation in action. Using the most advanced technology available, this low volume indoor geyser takes you from cold to hot at the turn of a tap.

Compact and powerful, the Dewhot 5lt LP punches well above its weight by employing the same reliable float/paddle wheel flow sensor as the Dewhot 12lt LP. This means the geyser has a flowrate activation of just one litre from less than a metre of head, making it the ideal geyser for JoJo tanks.

When it comes to safety, we've pulled out all the stops including two gas solenoids, a 20 minute cut off and the required ODS for all unflued indoor units.

Of course it's the Dewhot 5lt LP's versatility that is winning customers over with it being the ideal geyser for staff quarters, hand basins, offices, low flow showers, outdoor showers, lapas, off road trailers and low cost housing.

So if you're looking for a smart, safe and eco-friendly gas geyser, look no further than the Dewhot 5lt LP.
